MULTI SPINDLE DUAL PURPOSE OIL

from Advanced Chemical Solutions

We understand the challenge of lube oil leakage from the head stock system into the cutting oil, it's this intermingling of oils that can lead to premature tool failure, staining of metals, excessive smoking and an overall degeneration of your cutting oil.

Advanced Chemical Solutions has formulated their multi spindle dual purpose oil to eliminate these issues.

The use of our dual purpose oil as both lube oil and cutting oil assures excellent machinability while minimizing the likelihood of staining on the sensitive metals used in gear and hydraulic systems.

Multi spindle dual purpose oil formulation also includes the following:

- Chlorine
- non-staining light color inactive sulfur
Combined chlorine and sulfur offer extreme pressure properties for improved tool life
- Rust and Oxidation inhibitors.
- Anti-misting inhibitors
- Low odor

Address this age old problem today
